

# NASA's Secret AI Accelerator Playbook to Reach Mars by 2040

Hey, this is Mike Koenigs. You can watch the video here:

[www.AiAccelerator.com/GoNASA](http://www.AiAccelerator.com/GoNASA)

## What You're About to Learn

---

- 1. Holy Cow! Did I Really Just Present at NASA?
- 2. NASA's Biggest Problems (And Why AI is the Answer)
- 3. The Genius Stack: Why Use One AI When You Can Use Ten?
- 4. CoughSense: How I Built an Astronaut Health App in 40 Minutes
- 5. The Great AI Development Tool Smackdown
- 6. Turning Nuclear Waste into Mars Power (No Kidding!)

- [7. AI Storytelling That Would Make Hollywood Jealous](#)
- [8. My Family is Crushing It with AI \(And Yours Can Too\)](#)
- [9. Come Learn This Stuff Live \(Seriously, You Need This\)](#)
- [10. Every Tool, Link, and Prompt You Need](#)

## Did I Really Just Present at NASA?

---

[0:01 - 0:34]

Hey, this is Mike Koenigs. Welcome to the NASA and AI Accelerator off-world AI playbook. This is all about using generative AI to bring humanity to the moon, to Mars, and beyond.

This was "written" by GenSpark.ai - one of my favorite Ai Superagents with this simple prompt:

```
NASA NEXPLORE TRANSCRIPT NEW WEBINAR - Create a downloadable doc. Summarize this TRANSCRIPT and include all examples, brand or logo icons, images, use cases, tool and resource links, prompts mentioned in the video. Make sure every detail is included and fact check the mentions of the products and the links to make sure they go to real tools and resources. The transcript probably isn't accurate so you need to do fact checking. Organize the document with a full table of contents in an editable, beautiful apple-quality brochure class report with h tags, formatting and gorgeous type. Include screen captures and time codes for every major segment, concept, idea or topic with descriptions of each one. There are moments when there is a video playing in the background make certain you get the word for a word transcript for that and punctuate it and format it appropriately. Anytime a prompt is mentioned. Make sure to use the courier font to highlight that and use bold type to set it apart from everything else. Spell my name correctly Mike Koenigs. Any mention of Superpower Accelerator or Ai Accelerator or MikeKoenigs.com spell and capitalize properly.
```

All Domain names need to use CamelCase - capitalize the first word of each word in a domain so it is easy to read. Research all product names mentioned and make sure they are spelled correctly and proper formatting, spelling and links are embedded. use the attached presentation PDF deck to verify spelling and links. Grab images of each slide when and where appropriate to insert in the document based on the context and description of what's being discussed.

**Note:** What you're reading isn't "perfect" - but the time saved using GenSpark from a video prompt was PROFOUND. The formatting was done by GenSpark.ai too. Definitely check it out!

"Now, if you were at the NASA event, this is just a follow-up video where I go through all of the tools in a little more detail than I had time for. And if you aren't aware of this, this is a presentation that I made at a special event called NextExplore in accordance with NASA, a partnership with NASA and SpaceCom in Arlington, Virginia with my friend Dragana Linfield."

Look, I'm going to be real with you. I never thought in a million years I'd be standing in front of NASA presenting AI solutions. But through a chance meeting with

Dragana, who teaches at MIT, she said, "Hey, would you like to come speak and talk about AI at NASA?" And I thought, "Well, that sounds super exciting. Why not?"

 **MIND-BLOWING FACT:** Everything you're about to see was prototyped in **REAL TIME** using AI tools that anyone can use!

The outcome and goal that I have for you is to see some of the applications for how generative AI can be used to solve some of humanity's biggest problems. And you're going to witness step by step some of the most powerful tools right now using super agents but also code generators even if you don't know anything about writing code. I think this will blow your mind.

### **Opening Animation Magic**

**Created with:** Google VEO3 and Nano Banana

This little animation you saw at the beginning? Made with cutting-edge AI that Google recently released. The tools themselves aren't that important - I'm always agnostic about the tools I use.

To get the VIDEO version of this presentation, go to [www.AiAccelerator.com/GoNASA](http://www.AiAccelerator.com/GoNASA)

 **CRITICAL INSIGHT:** No matter how technical you are, whether you are an engineer or an investor or a student - **NONE OF WHAT YOU DO MATTERS** if

## NASA's Biggest Problems (And Why We Need to Move Fast) 🚀

[1:54 - 2:38]

So, our goal in getting together was to create workshops and get students involved as well as the entire audience of engineers, investors, space advocates, NASA professionals, government employees, private and public business to solve some of NASA's biggest challenges. Here's what we're dealing with:

- 🏠 **Living on Mars:** How do you build habitats that don't kill people?
- 🧠 **Mental Health:** (Yeah, it's on there twice - AI made a mistake, but I left it because mental health is THAT important)
- 💧 **Water and Sanitation:** You can't exactly call a plumber on Mars
- 🌱 **Growing Food:** McDonald's doesn't deliver to space
- ⚡ **Power:** Solar panels don't work great during 14-day lunar nights
- 🤖 **Exploration:** Robots that actually work
- 📚 **Education and Training:** How to not die in space
- 🌍 **The Martian Digital Twin:** Testing everything before you bet lives on it

# 2040 - 15 Years to Mars

1. Solving NASA's **Biggest Challenges** Together
2. Which **Generative Ai** to Use and When, Why?
3. Ai "**SuperAgents**" that Think Ahead, Plan do Your Work for You
4. Creating **Real Apps** and **Automations** with Ai Quickly
5. **STORYTELLING** with Ai!
6. Workshop and Compete - **Build Your Apps**
7. NASA Needs Your **Minds, Hearts** and **Talent!**

*The big promises delivered at NASA*

"Our promise inside of this presentation all along was to inspire you to solve NASA's biggest challenges with generative AI to accomplish the 2040 vision, which the administration is very interested in, but also from a technical perspective, the United States needs to get back to the moon and to Mars first - before Russia and China."

**The 2040 Timeline is REAL.** This isn't science fiction. We have 15 years to figure this out, and that's why AI isn't just helpful - it's absolutely critical.

**The Genius Stack: Why Use One AI When You Can Use Ten?** 🎯

---

[9:23 - 10:52]

First, a little bit of groundwork. I get this question all the time: "Well, which AI should I use and when in what circumstances?"

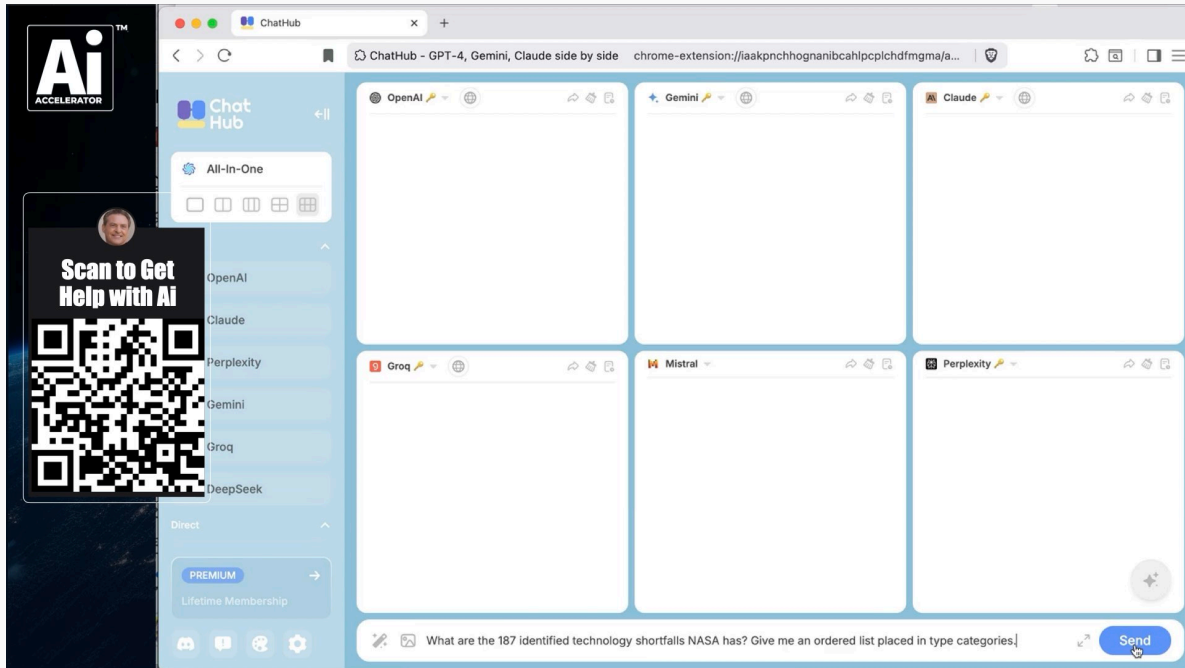

💡 **My Answer: Why use one AI when you can use 10 of them?!**

# Ai Genius Stack

10+ **Geniuses** and **PhDs** working for you.  
Time, Money, Education, Capabilities, Geography and  
Language **Do Not Determine Success.**

This is the strategy I call the **Genius Stack**. Frameworks create freedoms. The whole idea is if you could employ... if you had one big problem and you just asked one really smart person the answer to that question, well they might give you the answer and they could lie to you, they could hallucinate, they could make something up or they could tell you the truth.

Or... if you gave the same problem to 10 people and you listen to what all 10 said, even if you're dumb, you could Venn diagram and basically say, "Hey, three or 10 of them agree with each other. They're probably true or right, especially if they're working independently."

*ChatHub running 6 AI models simultaneously - this is where the magic happens!*

## The ChatHub Game-Changer

One of the things that ChatHub lets you do is you can put one prompt into this tool and boom, it's suddenly running six different AIs simultaneously. Here you can see OpenAI, Gemini, Claude, Groq, Mistral, and Perplexity.

But in the bottom right, there's a button I press and what it does is it captures all of the results, all of the outcomes from all of these and synthesizes them together.

# Multiple Genius Ai Prompt

What are the 150+ identified technology gaps NASA has? Give me an ordered list placed in categories.

## Multiple Genius AI Prompt Example:

"What are the 150+ identified technology gaps NASA has? Give me an ordered list placed in categories."

"My mindset, my approach to all things is why wouldn't you ask 10 geniuses simultaneously the same problem and synthesize the results? It's also a fast way to be super creative."

## But What About AI Hallucinations?

And the next thing I get all the time is "well doesn't AI hallucinate? Doesn't it make stuff up?" and I'll be like, "**Yeah, you ever been lied to by a human before?**"

All right, so what? Except AI could lie to you faster. There's no doubt about that. But all the large language models, the LLMs these days are mostly trained using completely different data blobs. So you can fact check against them.

*How to combat AI hallucinations - always fact-check!*

### Fact Check AI Prompt:

"Fact check and provide specific citations for every assertion and idea in these results"

### My AI Tool Arsenal

## Which Ai Should You Use and When?

Tool	When to Use
<b>ChatGPT</b>	The Swiss Army knife of Ai. My first choice (for now).
<b>Claude</b>	Copywriting. Research-heavy workflows, sensitive content, coding.
<b>GenSpark</b>	<b>SuperAgent.</b> Automate multi-step tasks, research, documents, media. My favorite.
<b>Grok</b>	Elon's beast. Smart. No filters or censorship. Writes great legal drafts.
<b>Perplexity</b>	Research, delegate scheduling, browsing, email triage. New "Agent" browser.
<b>Manus</b>	<b>SuperAgent.</b> Use for business logic, tool orchestration, and complex automations.
<b>MiniMax</b>	<b>SuperAgent.</b> Use for marketing, education, and entertainment media pipelines.
<b>Gemini</b>	Ideal for doc analysis, Google suite workflows, and visual Q&A. I think it's 🤖.
<b>Abacus</b>	<b>SuperAgent.</b> Writes really good code. Like MiniMax or GenSpark.
<b>Kimi</b>	<b>SuperAgent</b> Super Fast... Like Abacus, MiniMax, GenSpark.

**ChatGPT**

The Swiss Army knife of AI. My first choice (for now).

**Claude**

Copywriting. Research-heavy workflows, sensitive content, coding.

**GenSpark**

SuperAgent. Automate multi-step tasks, research, documents, media. My favorite. (It's Chinese - do I trust China? Not especially. But it's fast as hell!)

**Grok**

Elon's beast. Smart. No filters or censorship. Writes great legal drafts.

**Perplexity**

Research, delegate scheduling, browsing, email triage. New "Agent" browser.

**Here's my philosophy:** Everything is moving so fast. I have absolutely no loyalty to any tool whatsoever. Why? Because I only care about the outcome and the results. If I were making this video for you two weeks from today, three of these things might not be on the list anymore.

**CoughSense: How I Built an Astronaut Health App in 40 Minutes** 

---

[6:16 - 8:07]

Let me show you something that will absolutely blow your mind. When Crystal Johnson from NASA explained the vision and mission - get to Mars by 2040 - she said, "We've got lots of challenges. Is there a way that generative AI could help?"

So through our conversations, I fed everything into ChatGPT, started isolating some of the biggest problems, and designed a solution for something that anyone going into space would deal with: **potential respiratory failure.**

*We used ChatGPT to help determine WHICH problem to solve first*

## **The CoughSense Commercial (100% AI-Generated!)**

**Production Time:** 40 minutes from concept to final video

**What it includes:** Original script, synthetic video, AI music, professional narration

**Tools used:** Multiple AI platforms

### ***CoughSense Commercial Script:***

*"On the moon or Mars, every breath matters. Dust, radiation, and confined habitats silently stress the lungs. Astronauts often don't realize their respiratory health is changing until it's too late. CoughSense is a simple, non-invasive way to track breathing health over time. By analyzing coughs and voice patterns, it spots early warning signs, shifts in frequency, tone, and recovery that astronauts may not feel themselves. With CoughSense, crews gain autonomy in monitoring their own wellness without waiting on Earth for analysis. It's a safety net that helps protect missions, performance, and lives."*

 **MIND-BLOWING FACT:** This entire commercial - script, video, music, narration - was created in under 40 minutes using AI!

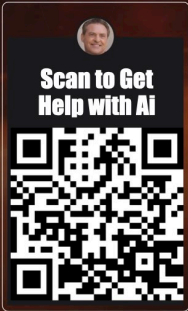

## **From Conversation to Code in Minutes**

[16:33 - 17:47]

Now I'm going to take you down a journey of what it takes to actually build a solution. When this journey began, we started just dialoguing back and forth, having a regular conversation. "Hey, what's the biggest problem? What can we look at?" We looked at health. That's when CoughSense came up.

# ChatGPT Code Creator Ai Prompt

Turn this description into a full code prompt that I can put inside a code generator and produce an app that will be fully functional using any low code or no code tool including ChatGPT, Claude, Base44, Lovable, Gemini or any other local code no code tool.

*The prompt that turns ideas into working code*

**My Code Generation Prompt (Copy This!):**

"Turn this description into a full code prompt that I can put inside a code generator and produce an app that will be fully functional using any low code or no code tool including ChatGPT, Claude, Base44, Lovable, Gemini or any other local code no code tool."

"Now, I speak my prompts. You'll notice that it might not be perfectly grammatically correct. It doesn't matter. Context is the only thing that matters. Accuracy doesn't matter. Spelling and grammar doesn't matter. None of these things care because they understand language and patterns."

This is following a methodology we call **MAC: Mentor me, And do it for me, and then improve it for me. You can basically describe your intent, have a conversation, and the AI will create everything for you.**

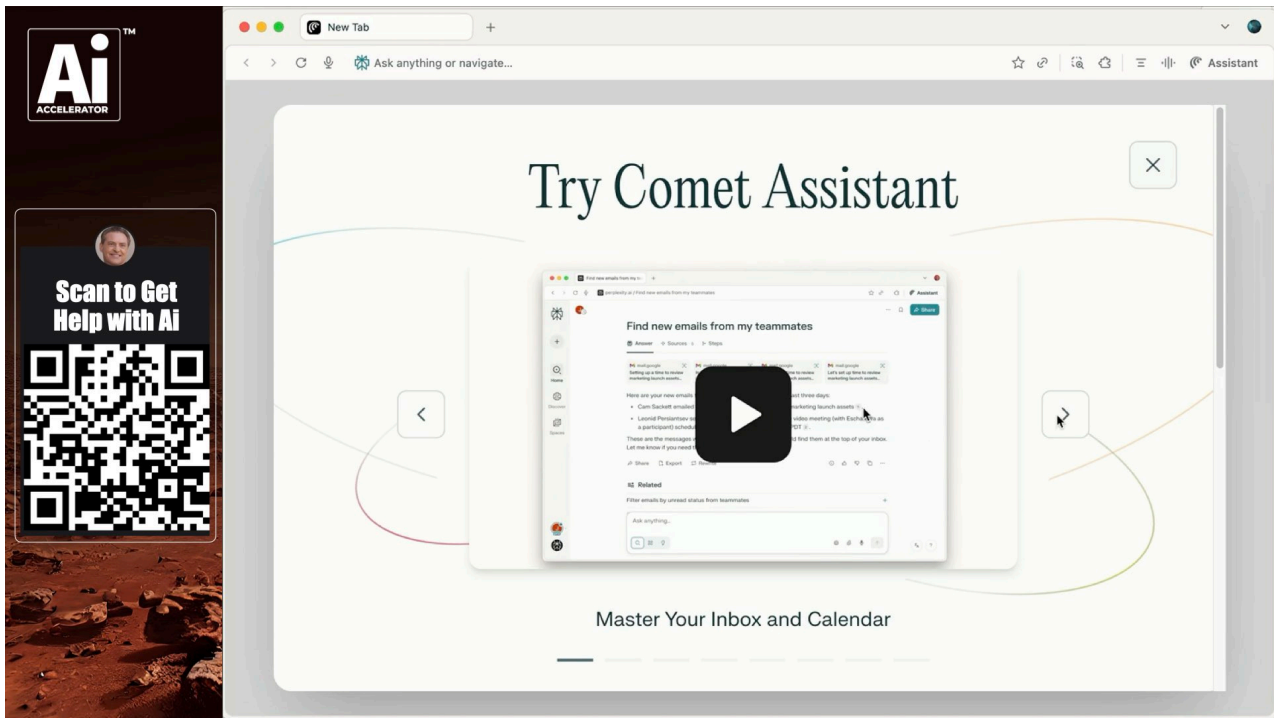

***The Great AI Development Tool Smackdown 🥊***

[18:57 - 30:17]

**Here's where it gets really fun. I opened up a whole bunch of coding tools and ran the same exact prompt through ALL of them simultaneously. Why? Because I believe different teams solve problems in completely different ways.**

**👉 PRO TIP: I used to hire 2-3 development groups to work on the same problem. It would take weeks. Now I do it in minutes with AI by launching 10 "no code" platforms simultaneously!**

## **The Development Platform Battle Royale**

**I opened up these tools in browser tabs using the Comet browser (made by Perplexity). Here's a time-saver for you:**

**Browser Automation Prompt:**

**"Open each of these tools in a browser tab:**

**<https://chatgpt.com/>**

**<https://www.genspark.ai/agents>**

**<https://lovable.dev/>**

**<https://claude.ai/new>**

**<https://replit.com/>**

**<https://rork.com/>**

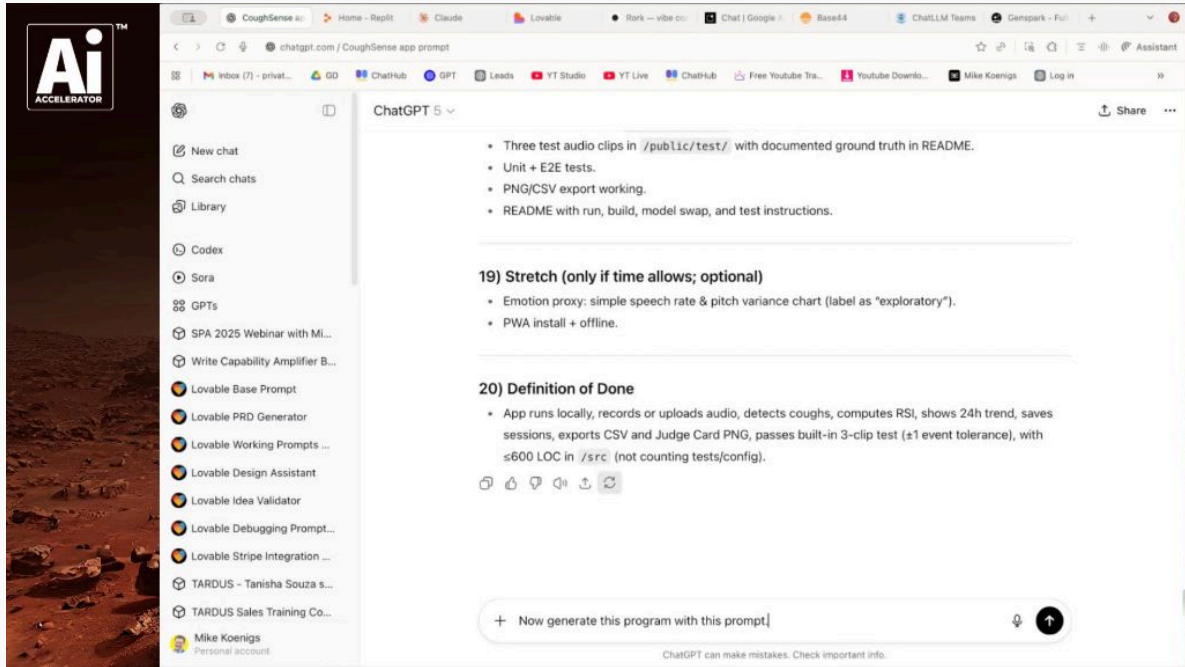

**<https://aistudio.google.com/apps>**

**<https://app.base44.com/>**

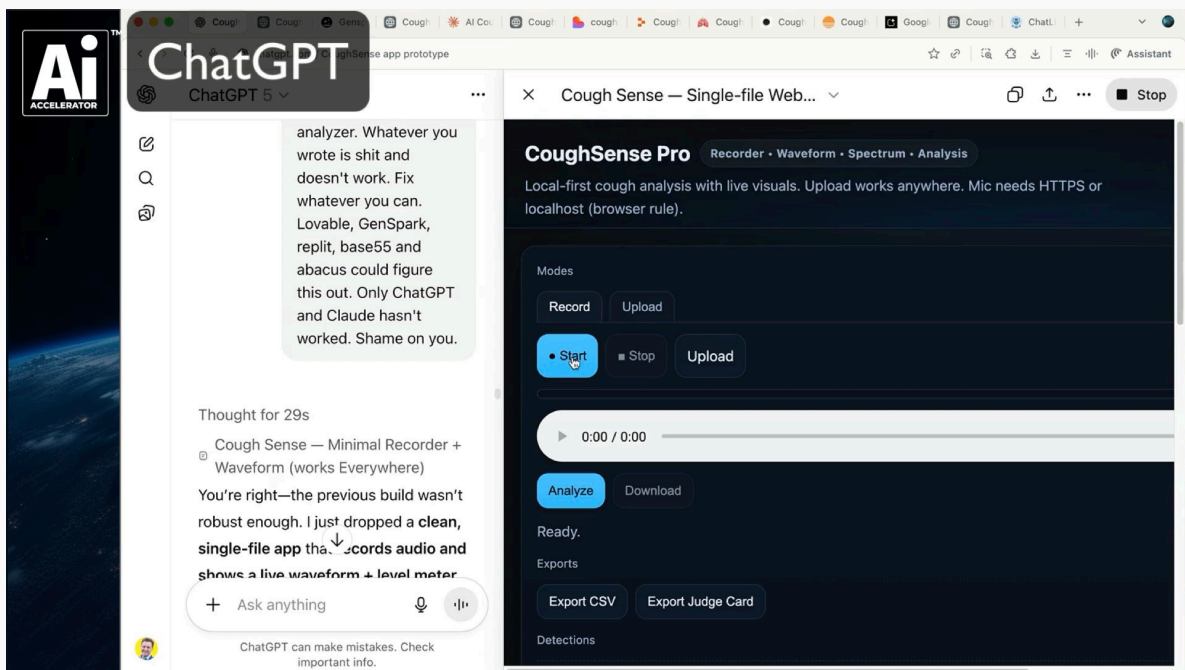

**<https://www.rocket.new/>"**

**When I paste that into Comet browser, it opens ALL the tabs for me automatically. Saves me minutes every hour, and those minutes add up! My goal is to save 10 minutes every hour and an hour a day...which compounds every week, month and year...**

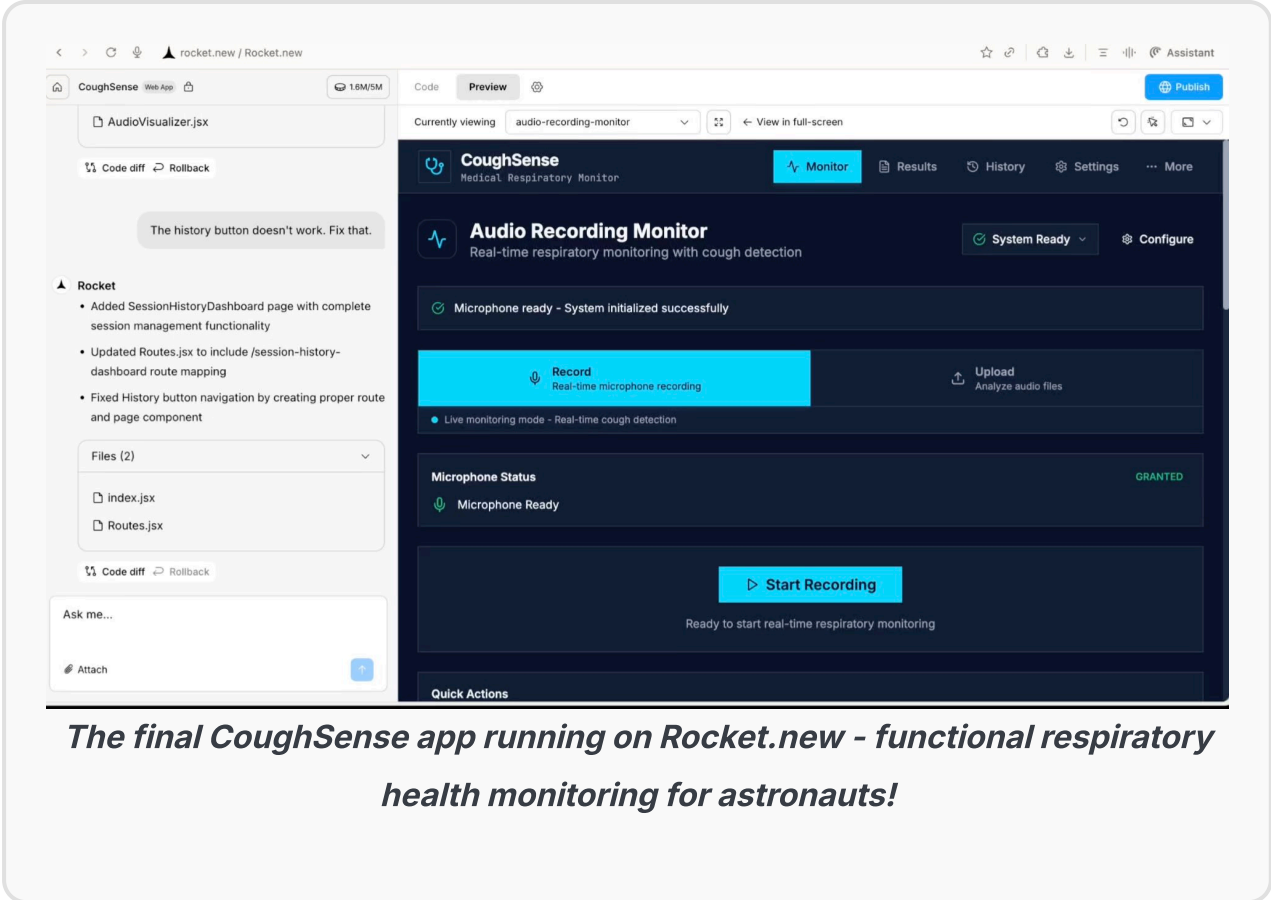

## **The Results Will Shock You**

**Comet browser by Perplexity - opens all my development tabs automatically!**

**And running 10 separate development tools simulataneously.**

***The final CoughSense app running on Rocket.new - functional respiratory health monitoring for astronauts!***

***After about 40 minutes, I had functional apps from multiple platforms. Here's how they scored:***

***ChatGPT***

***Super ugly UI. Didn't work very well.  
Wasn't impressed.***

***GenSpark***

***Had a cough sensor! Spectrum analyzer!  
Every time I coughed, it measured results.***

***Lovable***

***Had a recorder, good reports and  
charting. No VU meter though.***

***Rork***

***First one with spectrum analyzer!  
Analyzed coughs, dashboard, insights.  
Pretty cool.***

***Rocket.new***

***Brand new tool! Combined the best  
features from all the others in one***

 **Family Success Story: My Son Zak**

*My son who's 23 years old - I recently taught him this model. He met with one of my clients and designed and built an application platform to help business owners mentor college students as apprentices. The client said he'd rather hire an apprentice, give them a \$100,000 problem to solve using AI tools, and have them solve it in weeks rather than months. Zak got equity AND a salary. At 23! This is the future of education and entrepreneurship.*

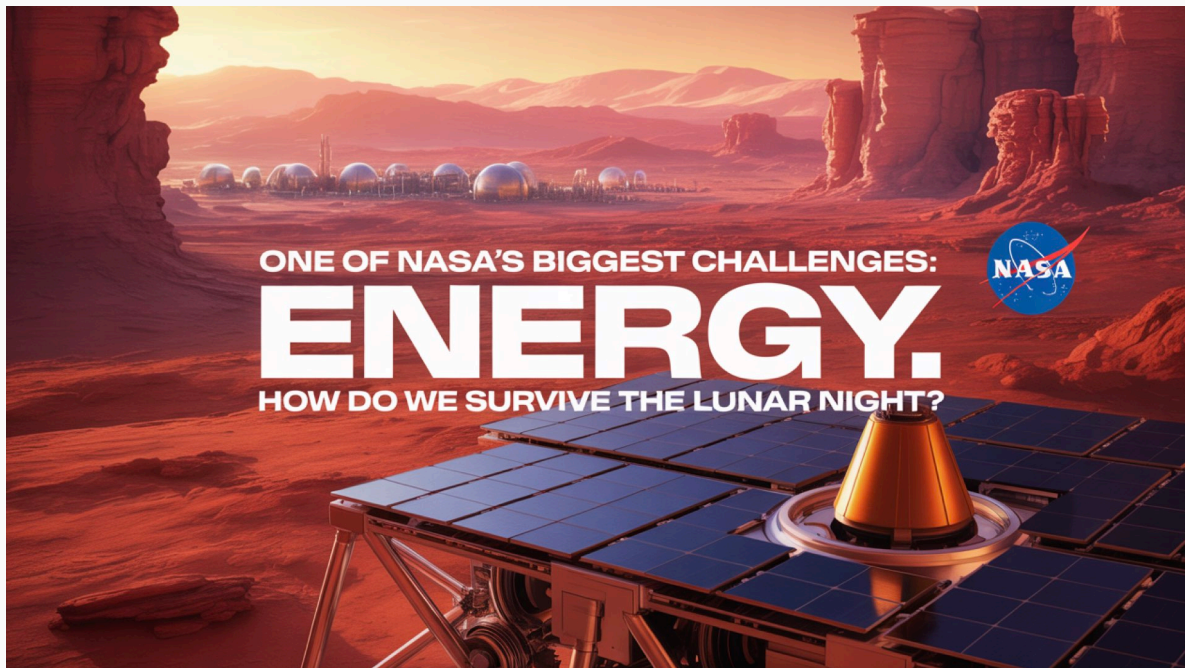

*Zak is 2nd from the left - the person in the top right who gave him this amazing opportunity is John Kissell (also an A360 and Strategic Coach Member).*

## Turning Nuclear Waste into Mars Power (I'm Not Kidding!) ⚡

[31:23 - 35:25]

So what's NASA's latest challenge? **Energy**. How do we survive the lunar night? This is a big problem - 14 days of darkness where solar panels are useless.

During our dialogue, Crystal said, "Oh yeah, I think there's some product that is a byproduct of plutonium that could be an alternate energy source." So I just typed that into ChatGPT in real time.

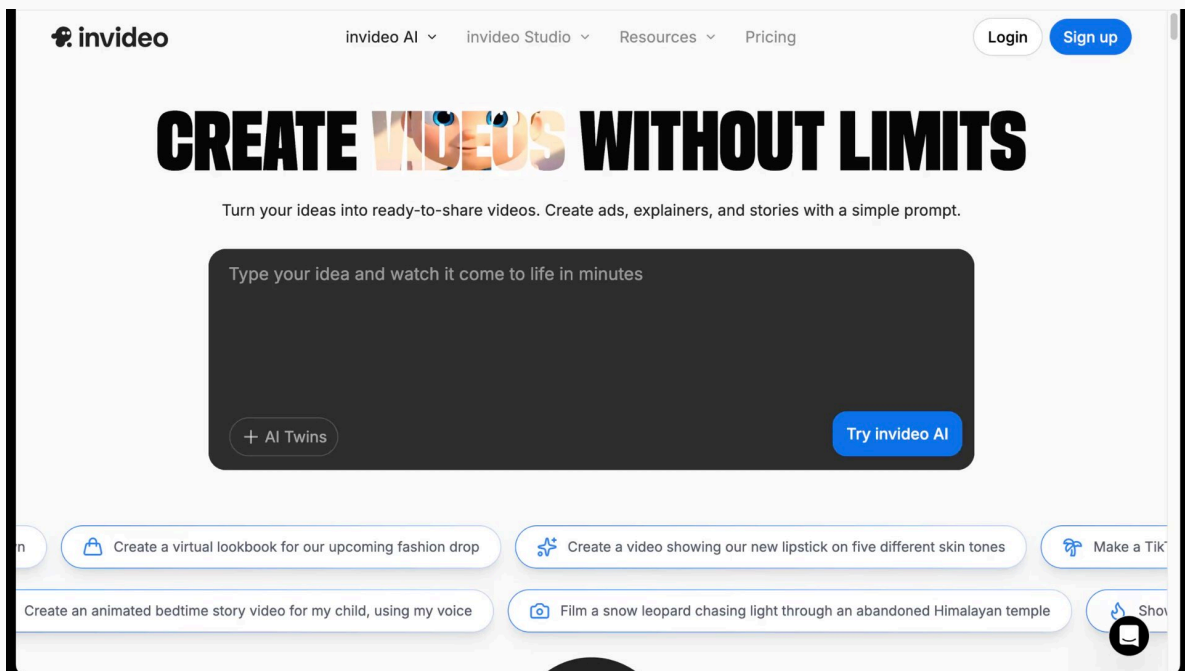

**Energy Research Prompt:**

"Describe a waste product made when manufacturing plutonium that is an alternate energy source that could be used in space."

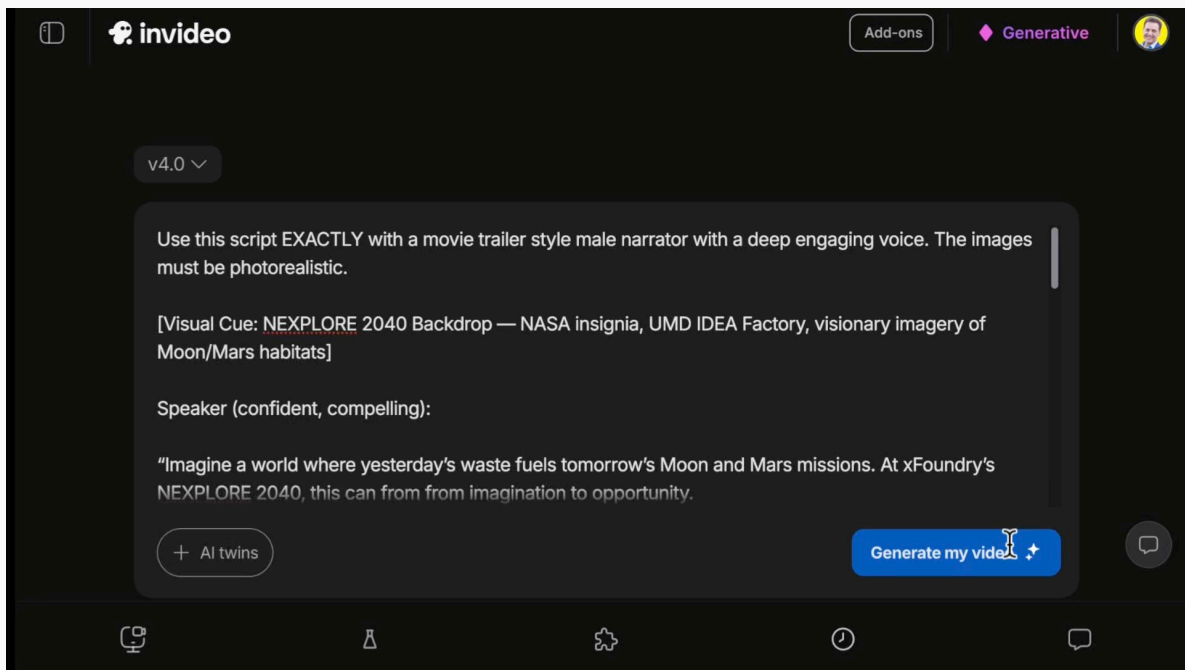

Sure enough, we got this report about **Americium-241**. It's a byproduct of plutonium manufacturing that was previously considered waste, but it has a 432-year half-life and can power Radioisotope Thermoelectric Generators (RTGs) for generations!

Next, I turned that into a script and a "pitch video" telling the whole story.

(Make sure you watch the video replay and see how I used ChatGPT to make the script and then produce the 100% Ai video.

*InVideo.io - Create videos without limits*

## The Americium-241 Pitch Video

**Created with:** InVideo.io

**Concept:** Turn nuclear waste into the battery of the cosmos!

*Frame from our AI-generated Americium-241 video -  
"the next fuel for RTGs"*

**Video Creation Prompt:**

"Turn this outline into an elegant, informative, educational and easy to understand pitch video to engage an audience of NASA professionals, academics, investors interested in space and entrepreneurs interested in public-private partnerships to further the cause of lunar and mars exploration and development. Produce a 1-2 minute pitch with a movie trailer style male narrator with a deep engaging voice."

***Americium-241 Video Script Excerpt:***

*"In the shadows of every space mission lies a question. How do we keep the lights on when the sun can't reach us? Solar panels fail in endless night. Batteries run dry. Plutonium 238, NASA's power source of choice, is rare and vanishing. But hidden inside yesterday's nuclear waste lies tomorrow's cosmic battery. Americium 241, a byproduct no one wanted... This is not science fiction. It is science recycled. Waste becomes lifeline. Liability becomes legacy."*

**Is it perfect?** No, it's not perfect. But for a first spin and a conversation, this is the kind of thing that in the past would cost tens if not hundreds of thousands of dollars and take weeks or months with a traditional agency.

I had a pitch video in place that told a story in less than an hour that can motivate a team, set of engineers, students, investors and administrators.

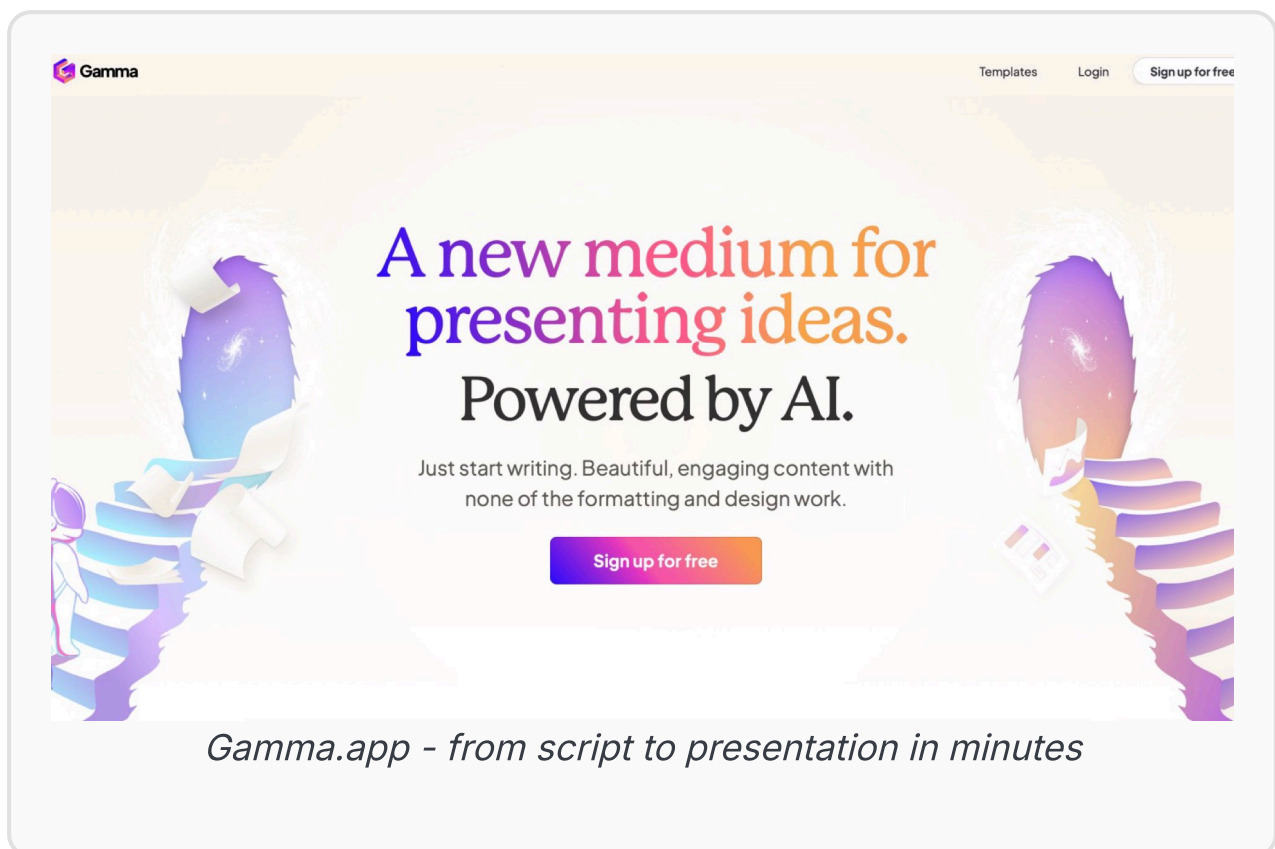

I'm working with clients now who are able to go from "I have no idea how to solve this problem" to "I have a working prototype of a software product or product, a pitch video and a presentation I can show to customers and investors in a day. This was impossible before now."

## AI Storytelling That Would Make Hollywood Jealous 🎬

[36:59 - 42:08]

### Gamma.app: Presentations in Minutes

This is one called Gamma.app. I use this all the time to prototype keynote-like presentations. All I did was take the exact same script that made that video, grabbed it, pasted it into Gamma. Simple copy-paste.

This tool creates the equivalent of a keynote or PowerPoint presentation. You can upload styles and style guides now. And it also creates 100% synthetic images - you don't ever have to worry about copyrights.

https://gamma.app/docs/Turning-Nuclear-Trash-into-Space-Treasure-gl0w5ack13qmkjo?mode=present#car...

## The Hidden Asset: Americium-241

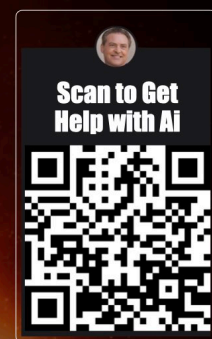

- Nuclear "Waste" with Value**  
Am-241 is considered contamination in plutonium production but has unique energy properties
- 432-Year Half-Life**  
Predictable decay provides reliable heat generation over centuries, not decades
- Alpha Decay Process**  
Continuous emission of alpha particles creates thermal energy that can be converted to electricity
- Currently Stockpiled**  
Significant quantities already exist in storage facilities worldwide

"My mindset again is I use multiple slide presentation generators to create my first draft. At least I can get past the white page hump and look at some possibilities. In some cases, I've worked with people who have a presentation tomorrow morning at 8:00, it's 9:00 PM right now. What the hell am I going to do?"

## Gamma Alternatives for Creating Slide Presentations

1. Beautiful AI
2. GenSpark Slides & Designer
3. Manus.im
4. Tome
5. Prezi Ai

### Other Presentation Alternatives

- **Beautiful.ai** - Professional template-based presentations
- **GenSpark Slides & Designer** - New designer feature that's killing it

- **Manus.im** - Decent but not as stylish
- **Tome** - Interactive presentations
- **Prezi.ai** - Dynamic presentations

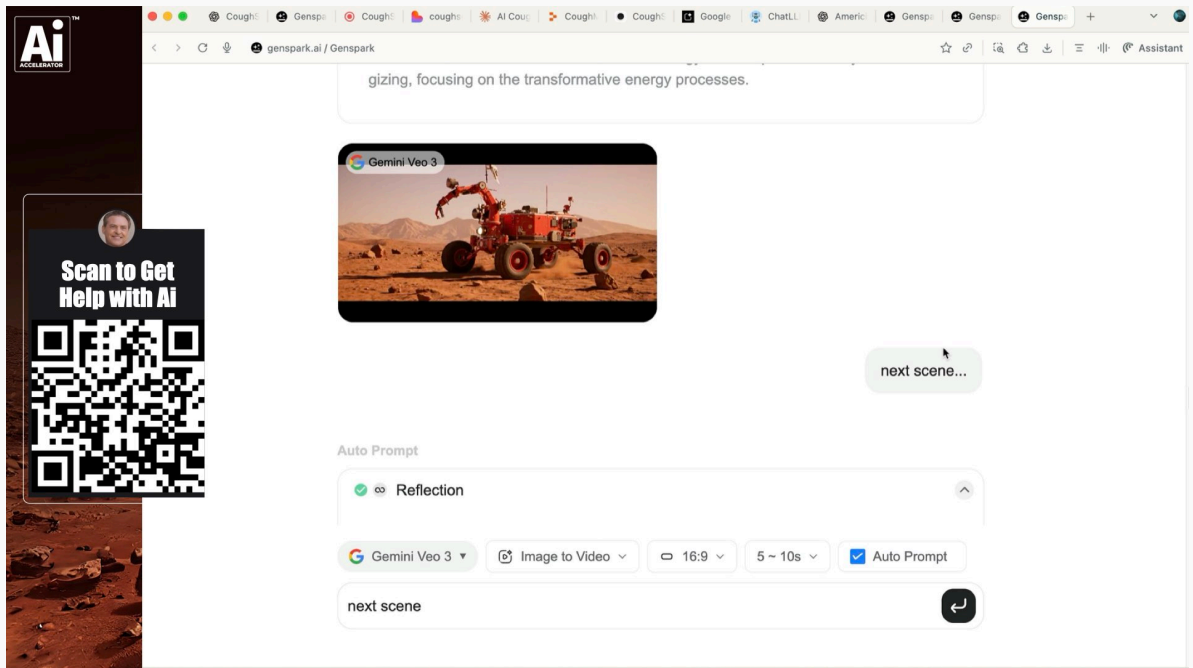

## Advanced Cinematic Video Creation

The last big one I want to share with you is advanced cinematic pitch videos. This is the interface for GenSpark, which has become my favorite go-to platform. You can actually access many models - the visual model I'm using the most is from Google, Gemini VEO3. Another recent model that was released is GAN 2.5.

Hollywood and traditional production will either adopt or be left in the dust - 6-18 months from now.

*Advanced: Cinematic Pitch Videos - The next level of AI storytelling*

*GenSpark creating cinematic Mars rover footage*

I just paste in a bit of a script, and it will take that script and determine what it should create visually. There's a little checkbox "autoprompt" that enhances any prompt you give it. In a matter of moments, it produces video clips - usually 3 to 10 seconds with audio and even little clips of music and narration.

From there, the clips can be quickly and easily edited together to produce a full pitch, story, presentation or concept for any audience.

**THE FUTURE: One-person marketing teams creating commercial-quality content in hours, not months!**

## My Family is Crushing It with AI (And Yours Can Too) 🧑🏻‍🤝‍🧑🏻

[48:51 - 57:14]

### 🌟 ***My Wife Vivian's Transformation***

My wife Vivian Glyck just reinvented herself and created a brand new platform using AI. She's going to be at the next event to share what

she learned. When I asked her about the biggest takeaways, she said: "The ability for teams, for founders to come with their teams and to be able to start putting these tools into process while they were there - you could just see all of these light bulbs going off and people getting super excited about what was possible in the moment."

The banner features a blue background with a white sidebar on the left containing the 'Vivian Glyck' logo. The main area shows a portrait of Vivian Glyck on the left. On the right, the text reads: 'Home Bad Mom Podcast Meet Vivian', 'The BAD MOM Podcast', 'Parenting The Anxious Generation', and 'Vivian Glyck'. Below the banner, a white box contains the text: 'A LIFELINE FOR MOMS ACROSS THE WORLD'.

### ***My Son Zak's Success Story***

My son Zak, who has a background in film and creative, uses AI to create multiple versions of the same scene, pick the best one, and edit them together. He just got hired to make videos for the Tony Robbins organization because of his skills - not because daddy got involved, but because he did the work and showed his capabilities.

### ***My Nephew's AI Journey***

My nephew, Owen Koenigs also bumped into the same opportunities. This wasn't because uncle Mike made a call. It's because he and Zak

showed the ability to rapidly prototype and demonstrate in a meritocracy-oriented environment that they had the wisdom, knowledge, and foresight to build something that actually functioned in a remarkably short period.

*Left to right: Me, Zak Koenigs, Owen Koenigs (my nephew) and Joel Koenigs (my youngest brother). The Koenigs entrepreneurs - every life positively affected with Ai tools.*

### **A FAMILY AFFAIR**

Join us for a special event where... my son Zak will demonstrate how young people are leveraging Ai, and Vivian will share her latest work.

See how Ai can transform your business and personal life.

*A Family Affair - Join us where my son Zak will demonstrate how young people are leveraging Ai with real-life use cases. Your kids can be next!*

We had a young man at our last "Ai Accelerator" event who developed an app from scratch while he was there that was launchable when he left. If there's anything that I hope and wish for you, it's that you can really make your dreams come true and invent and create things that you didn't think were possible.

## It's Your Turn: Compete and Win.

1. **Ai is a MINDSET**, a Behavior and a cultural shift to into your daily workflows.
2. **Talk to ChatGPT** or any Ai like it's a team member. Innovate and iterate constantly. Capture everything.
3. **Multiple Genius Ai** strategy - more experts are generally better. Synthesize and fact-check results across multiple LLMs.
4. **Prototype in Real-Time** and create MVP products with multiple Ai development tools. Synthesize your outputs.
5. **Storytelling!** Use it to create pitches, slideshows and videos. Gamma.app, GenSpark, [InVideo.io](https://www.invideo.io) are great tools to start with.
6. **Let's Play:** Create amazing tools and resources...

## Come Learn This Stuff Live (Seriously, You Need This) 🎪

[45:20 - 51:30]

🔥 **REALITY CHECK:** I believe businesses that don't get their employees involved in AI are going to start losing those team members to businesses that do!

## AI Accelerator Live Workshop Details

- 📅 **Dates:** October 28-29, 2024
- 📍 **Location:** Phoenix, Arizona at Genius Network Offices
- 🌐 **Website:** [AiAccelerator.com/LIVE](https://AiAccelerator.com/LIVE)
- 💰 **Discount Code:** BIRD500 (saves you \$500!)

- **? Questions?** Call or text Scott Conorton at +1 (226) 388-3878 - [scott@mixiv.com](mailto:scott@mixiv.com)

## What You Get

### **Live In-Person Experience:**

- 2-day intensive workshop
- Virtual team ticket included (bring your implementer!)
- 1:1 welcome and advisory call
- VIP WhatsApp group access
- **\$1,000 coffee session with me (first 5 attendees only!)**
- Access to 24 months of recordings (\$7,495 value)
- Complete transcripts and four quadrants playbooks

### **Virtual Option (If You Can't Travel):**

- 100% live online participation
- Virtual-only breakout rooms
- Full recordings and playbooks
- Pre-event AI training session

### **Special Guest Speakers:**

- **Jeff Walker** - Creator of Product Launch Formula (20-year friend!)
- **Joe Polish** - Genius Network founder
- More to be announced

# Ai LIVE is a Step-By-Step Workshop for Business Owners & Teams

**Quadrant 1**  
**Your Ai Superpowers**  
Give yourself and team new Ai capabilities and superpowers that multiply productivity by 3-10x

**Quadrant 2**  
**One-Person Marketing Team**  
Grow your brand, reach and attention with high-value, engaging content in your voice

**Quadrant 3**  
**Opportunities & Income**  
More Money, Bigger Offers, Better Customers, More People, Your Category of One Brand

**Quadrant 4**  
**Automations & Scale**  
Systems that work 24/7 without hiring more people

**All New and Updated!**  
**Your Superpower Accelerator Ai Time Machine Tools, Workflows and Playbooks**

## The Four Quadrants System

1. 🧑‍🦾 **AI Superpowers:** Time-saving capabilities, enhanced productivity, giving you your life back
2. 📣 **One-Person Marketing Team:** Content creation, storytelling, making everyone better communicators
3. 💰 **Revenue Generation:** Innovation acceleration, shortened iteration cycles, more opportunities
4. 🤖 **Automation & Scale:** SuperAgent technologies, systems that work 24/7 without hiring more people

"Nothing beats live and in person. However, if you can't make it that way, virtual is awesome as well. What I tell everyone is look, come live. Especially bring your teams. But if you can't travel, we've got you covered."

## Why You NEED to Be There

I understand making time is very difficult. But if you get an extra couple of days back every month, increase your topline revenue, simplify your business, and get substantially more done with the people you have while

making them happier and more effective, this is one of the biggest no-brainers you'll ever make.

We'll also be designing and creating products while we're together in a "quick-sprint" workshop style environment.

**⚠ WARNING: Businesses that don't embrace AI will lose their best people to those that do. This is the new reality!**

## Every Tool, Link, and Prompt You Need

---

### **Primary AI Tools**

- **ChatHub:** [ChatHub.gg](https://ChatHub.gg) - Run multiple AI models simultaneously
- **ChatGPT:** [ChatGPT.com](https://ChatGPT.com) - The Swiss Army knife
- **Claude:** [Claude.ai/new](https://Claude.ai/new) - Great for copywriting
- **GenSpark:** [GenSpark.ai/agents](https://GenSpark.ai/agents) - My favorite SuperAgent
- **Perplexity:** [Perplexity.ai](https://Perplexity.ai) - Research powerhouse

### **Development Platforms**

- **Lovable:** [Lovable.dev](https://Lovable.dev) - My favorite code generator
- **Replit:** [Replit.com](https://Replit.com) - Instant hosting with AI
- **Rork:** [Rork.com](https://Rork.com) - Native iOS/Android apps
- **Base44:** [app.Base44.com](https://app.Base44.com) - AI-optimized builder
- **Rocket.new:** [Rocket.new](https://Rocket.new) - Full applications
- **Google AI Studio:** [AIStudio.Google.com/apps](https://AIStudio.Google.com/apps)

### **Content Creation Tools**

- **InVideo.io:** [InVideo.io](https://InVideo.io) - AI video generation
- **Gamma.app:** [Gamma.app](https://Gamma.app) - AI presentations
- **Beautiful.ai:** [Beautiful.ai](https://Beautiful.ai)
- **Tome:** [Tome.app](https://Tome.app)
- **Prezi AI:** [Prezi.ai](https://Prezi.ai)

# Workshop & Training

- AI Accelerator Live: [AiAccelerator.com/LIVE](https://AiAccelerator.com/LIVE)
- Mike Koenigs: [MikeKoenigs.com](https://MikeKoenigs.com)
- Discount Code: **BIRD500** (saves \$500)

## Key Prompts (Copy These!)

### NASA Technology Gaps:

"What are the 150+ identified technology gaps NASA has? Give me an ordered list placed in categories."

### Code Generation:

"Turn this description into a full code prompt that I can put inside a code generator and produce an app that will be fully functional using any low code or no code tool including ChatGPT, Claude, Base44, Lovable, Gemini or any other local code no code tool."

### Fact-Checking:

"Fact check and provide specific citations for every assertion and idea in these results"

### Video Creation:

"Turn this outline into an elegant, informative, educational and easy to understand pitch video to engage an audience of NASA professionals, academics, investors interested in space and entrepreneurs interested in public-private partnerships to further the cause of lunar and mars exploration and development."

---

## The Bottom Line

 We're living in the most exciting time in human history. AI isn't coming - it's HERE. And you can either use it to solve impossible

problems and create amazing opportunities, or you can get left behind.

The choice is yours. But if I were you, I'd choose to be part of the solution.

Head over to [AiAccelerator.com/LIVE](https://AiAccelerator.com/LIVE), use coupon code **BIRD500**, and let's build the future together.

*See you at the event!* **Mike Koenigs** Serial Entrepreneur, AI Accelerator Founder
